

Clinical Examination and Case Management (Skin Cancer)

30 Credits at
Level 6 or 7

THE AIMS OF THIS MODULE ARE:

- To develop existing knowledge and skills of the principles of anatomical examination and pathophysiology underpinning patient assessment, and enhance the clinical skills associated with assessment in order to undertake safe examination amongst a specified client group, with the ability to demonstrate clinical reasoning
- To develop an understanding of the disease processes for a specified client group and the skills required to assess and manage these clients within professional boundaries and protocols
- To identify opportunities for patient care and service delivery
